Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 20, Application US/09856662

GENERAL INFORMATION:
APPLICANT: MORIBE, TOYOKi et al.
TITLE OF INVENTION: Method for typing HLA class 1 genes
FILE REFERENCE: 0032-0261P
CURRENT APPLICATION NUMBER: US/09/856,662

CURRENT FILING DATE: 2001-05-24

PRIOR FILING DATE: 1998-11-26

NUMBER OF SEQ ID NOS: 130

SEQ ID NO 20

                                                                                                                                 ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes an antisense compound (1), 8 to 30

nucleobases in length, that is targeted to a nucleic acid molecule
encoding STAT3 (Signal Transducer and Activator of Transcription) and
which inhibits the expression of it. (1) has antinflammatory,
antirheumatic, cytostatic and immunostimulatory activities. (1) is used
for inhibiting the expression of STAT3 in cells or tissues, treating an
animal having a disease or condition associated with STAT3 or a human
chaving a disease or condition characterised by a reduction in apoptosis,
and inducing apoptosis in a cell. Diseases or conditions that are treated
and/or neck, leukaemia, myelonma, melanoma or lymphoma. (1) can also be
used for diagnostic methods in detecting and determining the role of
STAT3 in various cell functions, physiological processes and conditions
and for diagnostic the orditions associated with expression of STAT3:
(1) can be used alone or with other drugs as an immunostimulator. (1) is
used in sandwich and colourimetric assays, involving enzyme conjugation
and radiolabeling and is used in diagnostic kits. AAC93150 encodes human
STAT3 and AAC93231 encodes mouse STAT3 as given in the exemplification of
the present invention. AAC93151 to AAC93120 to AAC93231 to AAC932310 to AAC9323
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antisense compound for inhibiting the expression of signal transducer and activator of transcription 3 (STAT3) in cells or tissues and treating diseases or condition associated with STAT3, such as rheumatoid arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the present invention. AAC93151 to AAC93230 and AAC93232 to AAC93299 represent STAT3 phosphorothioate antisense oligonucleotides, and AAC93300 represents a mismatch control oligonucleotide which are used in example

The invention relates to antisense compounds targeted to a nucleic acid molecule encoding a signal transducer and activator of transcription (STAT) protein, specifically STAT3, where the antisense compounds inhibit the expression of STAT3. The antisense sequences are useful for inhibiting the expression of STAT3 in cells or tissues, inducing Fasnediated apoptosis in cells, and sensitising cells to apoptosis. They are associated with STAT3. These disorders include inflammatory or autoimmune disease, particularly rheumatoid arthritis, cancers, such as those of the breast, prostate, brain and head and neck and leukaemias, myelomas, melanomas and lymphomas. Also treatable are human diseases or conditions characterised by a reduction in apoptosis or an insensitivity to apoptotic signals. The sequences of the invention can be used in clinical apoptotic signals. The sequences of the invention can be used in clinical

c having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and inhibits its expression; (2) a method of inhibiting the expression of mPGES-1 in cells or tissues; and (3) a method of treating an animal chaving a disease or condition associated with mPGES-1. MPGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic, antishebetic, immunomodulator; cardiant, neuroprotective, antishabetic, immunomodulatory and cardiovascular activities, and can cophen meed for preparing a composition for treating a disease or condition associated with mPGES-1 e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antisense therapy; antiproliferative; antiinflammatory; antipsoriatic; cytostatic; dermatological; cardiant; virucide; ophthalmological; keloid; skin disorder; Insulin-like Growth Factor I receptor; IGF-1; pityriasis; IGF binding protein; IGFBP-2; IGFBPB; inflammation; psoriasis; prowth factor mediated cell proliferation; ichthyosis; serborrhoea; ruba; keratosis; neoplasia; selaroderma; wart; skin cancer; sclerotic disease; hyperneovascular condition; hyperplasia, kidney disease; neovascular condition of the retina; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a method for ameliorating the effects of skin disorders. The method comprises contacting the skin with an antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBP]-2 or IGFBP3), which is capable of inhibiting or reducing growth factor mediated cell proliferation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ameliorating the effects of a disorder, e.g. psoriasis, by administering UV (ultra-violet) treatment (optional) and an antisense nucleic acid that inhibits or reduces growth factor mediated cell proliferation and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

inflammation and/or other disorders. The present sequence is an oligonuclectide which can be used to design the antisense oligonuclectides of the present invention (see AAF45151 and AAF45153-F45161). The method is useful for ameliorating the effects of psoriasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, brain or skin, growth factor-mediated malignancies, other sclerotic disease, kidney disease, hyperpoliferation of the inside of blood vessels or any other hyperplasia
                                                                                                                                                                                                                                                          Gaps

The present invention relates to a method for ameliorating the effects of skin disorders. The method comprises contacting the skin with an antisense oligonuclectide, (for Insulin-IRA Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBP]-2 or IGFBP3), which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonuclectides which can be used to design the antisense oligonuclectides of the present invention (see AAF45151 and AAF45153-F45161). The method is useful for ameliorating the effects of psoriasis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a method for diagnosing pancreatic cancer (PNC) or a predisposition to developing PNC in a subject. The method comprises determining a level of expression of a PNC-associated gene in a patient derived biological sample, where an increase or decrease of the clevel compared to a normal control level of the gene indicates that the subject suffers from or is at risk of developing PNC. Also described: (1) a PNC reference expression profile, comprising a pattern of gene expression of two or more genes, i.e. PNC 1-605 or PNC 850-866 and PNC 894-906; (2) a method of screening for a compound for treating or preventing PNC or malignant PNC; (3) a kit comprising a detection reagent which binds to two or more nucleic acid sequences, i.e. PNC 1-605 or PNC 850-866 and PNC 894-906 or the encoded polypeptides; (4) an array comprising two or more nucleic acids which bind to one or more nucleic acids equences, i.e. PNC 1-605 or PNC 850-866 and PNC 894-906 or the encoded polypeptides; (4) an array comprising two or more nucleic acids which bind to one or more nucleic acids which bind to one or more nucleic acids equences, i.e. PNC 1-605 or PNC 850-866 and PNC 894-906; (5) a method of treating or preventing PNC; no subject; (6) a composition, for treating or preventing PNC; comprising a pharmaceutical amount of: (a) an antisense polynucleotide or small interfering subject; (b) a composition, completed or small interfering or protein encoded polynucleotide, i.e. PNC 1-259, PNC 606-640 and PNC 682-741 or PNC 850-87 any one gene, i.e. PNC 1-259, PNC 606-640 and PNC 682-741 or PNC 850-86 and PNC 682-741 or PNC 850-87 any one gene, i.e. PNC 1-259, PNC 606-640 and PNC 682-741 or PNC 850-87 and PNC 850-874 or PN
                                                                                                                      ö

ingredient and a pharmaceutical carrier; and (7) a method of predicting recurrence of PNC. The compounds have cytostatic activity, and can be used in vaccines and in gene therapy. The method is useful in diagnosing PNC or a predisposition to developing PNC in a subject. The methods, compounds and compositions are useful in treating or preventing PNC. The polypeptides are useful as vaccines against PNC. The present sequence represents a reverse transcription (RT) PCR primer used in semi-appresents.

                                                                                                                                                                                                                                                                                                                                                                             antidiabetic, immunomodulator, cardiant, neuroprotective, antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic, ophthalmological, immunomodulatory and cardiovascular activities, and can be used as mores. Inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mPGES-1 e.g., inflammation, Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                          The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The human mPGES-1 gene is located on chromosome 9, more specifically to 9d34.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and inhibite its expression; (2) a method of inhibiting the expression of mPGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mPGES-1. MPGES-1 chimeric antisense compounds have cytostatic, antisense compounds have cytostatic,
               New antisense compound, having a sequence targeted to a nucleic acid encoding mPGES-1, useful for preparing a composition for treating e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /note= "phosphorothioate linkages and all cytidine residues are 5-methylcytidines"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human mPGES-1 chimeric antisense oligonucleotide SEQ ID NO:1013.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;

The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The human mpGES-1 gene is located on chromosome 9, more specifically to organize the present invention also describes: (1) antisense compounds, paying a sequence comprising 8-30 bp targeted to a nucleic acid encoding mpGES-1, which specifically phybridise with the nucleic acid encoding inhibits its expression; (2) a method of inhibiting the expression of mpGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mpGES-1. MpGES-1 chimeric antidiabletic, immunomodulator, cardiant, neuroprotective, cantidiabletic, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound condition associated with mpGES-1 e.g., inflammation, Alzheimer's condition associated with mpGES-1 e.g., inflammation, Alzheimer's chisease, arthritis, diabates, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cytostatic; antiviral; neuroprotective; nootropic; neuroleptic; ss; primer; probe; tumour suppression; tumour reversion; apoptosis; virus resistance; transgenic animals; Alzheimer's disease; schizophrenia;

                                                                                                                                                                                                    fragments of at least 15 consecutive nucleotides of these nucleotides, a fragments of at least 15 consecutive nucleotides of these nucleotides, a sequence having at least 80% identity, after optimal alignment, with the nucleotides, or the complement, or corresponding RNA, of the nucleotides. The nucleotides are used as probes or primers for detecting, identifying and/or amplifying nucleic acids, as in vitro sense and antisense sequences, of nucleotides involved in tumour suppression or reversion, apoptosis and or viral resistance, to produce recombnant polypeptides, and to prepare transgenic animals, as experimental models. The nucleotides (also vectors containing them and cells containing the vectors), the encoded polypeptides and antibodies of viral infections or diseases characterized by development of tumours or cell degeneration (e.g. Alzheimer's disease or schizophrenia).

Analysis of the expression of the nucleotides can be used for diagnosis also be used to soreen for their specific interactive molecules.

Cond/or prognosis of these diseases. The nucleotides and polypeptides can also be used to soreen for their apsociated with abnormal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New genotyping oligonucleotide, useful for detecting the presence, absence or identity of single polynucleotide polymorphism in a nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequences AAH37205 - AAH40944 represent PCR primers, single nucleotide primer extension (SNPE) primers, and the sequences of regions flanking
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       with tumour suppression or regression, apoptosis or virus resistance. invention relates to these sequences or sequences having at least 80% identity to them, and polypeptides encoded by the sequences or polypeptides having 80% identity to the polypeptide sequences. The invention is used to diagnose or treat viral disease or disease characterized by development of tumour cells or cellular degeneration
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents an isolated nucleic acid sequence associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                         New nucleic acid sequences associated with tumor suppression, regressapprosts or virus resistance are useful to diagnose and treat viral disease, development of tumor cells and cell degeneration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

circa of single musicalize purymosphisms ones. The presence of a SNP, using the coliqueds kits for determining the presence or absence of a SNP, using the coliqued strain for determining the presence or absence of a SNP, using the coliqued of the invention. The PCR primers are used to amplify a SNP flanking sequence, the SNPE primer is used as a genotyping primer. The oligonucleotides are useful for genotyping a nucleic acid sample by performing a single-nucleotide primer extension reaction. The oligonucleotides are useful for determining the presence, absence or classess by association analysis the genotype of an individual or group of individuals, having a pathological phenotypic trait suspected of being caused by one or more SNPs. Phenotypic traits include diseases e.g. agammaglobulinaemia, diabetes insipidus, Lesch-Nyhan syndrome, muscular dystrophy, familial hypercholesterolaemia, polycystic kidney disease, osteogenesis imperfecta and acute intermittent porphyria. Phenotypic traits also includes appropent is or may be genetic such as autoimmune diseases of which a component is or may be genetic such as autoimmune cliesases, including, rheumatoid arthritis, multiple sclerosis, cancer, cancer, nervous system diseases and infection by pathogenic microorganism. The method is also useful in forensic investigations and patematicy, according DNA sequence represents a PCR primer specific for a human SNP containing DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Inspecting genetic susceptibility of Helicobacter pylori- related gastric carcinoma by checking Lewis blood-type antigen-associated gene polymorphism, applicable in screening individuals with high risk.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Helicobacter pylori; gastric carcinoma; Lewis antigen; polymorphism; PCR;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method for inspecting the genetic susceptibility of Helicobacter pylori related gastric carcinoma. The method of the invention comprises checking the polymorphism of the Le blood-type antigen-associated gene, with susceptibility particularly based on the recessive se allele and/or dominant homozygous Se/Se
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
single nucleotide polymorphisms SNPs. The present invention

The sequences given in AAQ71110-55 are primers which were used to amplify the 17 exons of the NPZ gene. NPZ is a neurofibromatosis which is characterised by bi-lateral schwannomas. The NPZ "gene" has been shown by linkage studies to be assigned to chromosome 22. The missing or mutated gene in NPZ patients has been shown to be the merlin gene. The gene encodes a protein, merlin (moesin-ezin-radixin-like protein), which possesses tumour suppressor activity, and whose tumour suppressor activity, and whose tumour suppressor activity and whose tumour suppressor activity is mediated by interactions with the cytoskeleton. The merlin D22528. In patients suffering from NPZ, the merlin gene is either lost or mutated. A mutant merlin protein may be encoded by a gene in which a
                                                                                                                                                                                                                                                 ö
genotype. The method is applicable in screening individuals with high risk and in a follow-up survey for intervention, prevention and early diagnosis. In an experiment from the invention the Lewis gene fragments with TS9G, G508A and T1067A polymorphism sites for PCR amplification were obtained for use after extracting samples of peripheral lymphocyte DNA from subjects. The mutation was then identified for assessing disease risk and diagnosis. The current sequene represents a PCR primer for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PCR primer 5 (AAT90721) and primer 6 (AAT90722) were designed to amplify DNA encoding the S4 region of human KVLQT1 (see AAW10038). PCR primers (AAT90717-28) were used in single-strand conformation analysis (SSCP) to define mutations in the human KVLQT1 gene (see AAT90710) associated with long QT syndrome (LQT). An initial SSCP identified an anomalous conformer in LQT-affected members of 6 large families. Further SSCP analyses identified a KVLQT1 intragenic deletion and 9 missense mutations associated with LQT in small families and sporadic cases
mutation of A to T at the first position of the codon encoding amino acid 220 causes the substitution of Tyr for Asn. The merlin gene may be used in gene therapy for the treatment of a merlin-associated tumour or NF2, or for prevention of schwarnoma, meningioma, posterior capsular lens opacities, deafness or hearing loss, balance disorders or paralysis.

                                                                                                                      PCR primer 5 (AAT91069) and primer 6 (AAT91070) were designed to amplify DNA encoding the S4 region of human KVLQT1 (see AAM33355). PCR primers (AAT91065-76) were used in single-estrand conformation analysis (SSCP) to define mutations in the human KVLQT1 gene (see AAT94004) associated with long QT syndrome (LQT). An initial SSCP identified an anomalous conformer in LQT-affected members of 6 large familites. Further SSCP analyses identified a KVLQT1 intragenic deletion and 9 missense mutations associated with LQT in small families and sporadic cases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
New isolated human potassium channel gene, KVLQTI, - used to develop products for diagnosis, prevention and therapy of long QT syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  KVLQT1; KCNE1; long QT syndrome; LQT syndrome; minK protein; antiarrhythmic; gene therapy; human; PCR primer; ss.

The invention relates to KVLQT1 nucleic acids which have a mutation compared to wild-type KVLQT1 (AAZ98901) The KVLQT1 gene encodes a protein of 676 amino acids which forms a cardiac I(ks) potessium channel with the KCNE1 protein (AAY80563). The KVLQT1 gene contains 15 introns and encodes a protein containing 6 putative transmembrane segments and a pore forming region. The gene has been mapped to the chromosomal location 11p15.5. The sequences AAZ98911-Z98982 represent PGR primers used to diagnose mutations in the KVLQT1 gene. Wutations in the KVLQT1 or KVNE1 genes result in cardiac arrhythmias observed as a prolonged QT curve in electrocardiograms (Long QT syndrome). The genes and proteins can be used for the diagnosis of subjects with long QT syndrome. They can also be used to screen for drugs which can be used for treating or preventing long QT syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /mod_base= OTHER

/mod_base= OTHER= phosphorothioate nucleotide. All cytosines
are 5-methylcytidines. Residues 1 to 5 and 15 to 20 are
2'-methoxyethyl nucleotides."
                                        New isolated mutant KVLQT1 nucleic acids, useful for developing products for the diagnosis, prevention and treatment of long QT syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antisense; kinesin-like 1; NZ kinesin; bimC kinesin; cellular proliferation; cancer; B-cell leukaemia; autoimmune disease; carpal tunnel syndrome; Raynaud's phenomenon; systemic sclerosis; Sjorgren's syndrome; rheumatoid arthritis; polymyositis; polyarteritis; systemic lupus erythematosus; human; ss; ISIS 344901; rat.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                       The invention relates to KVLQT1 and KCNE1 genes, associated with long QT (LQT) syndrome. It provides a minK protein comprising a mutation which substitutes the wild type amino acids with Leu, Asp, Leu, His, Trp and Ala or Thr at residues 74,76,28,32,98 and 127 respectively. Screening KVLQT1 and KCNE1 is useful for identifying mutations for diagnosing and treating LQT. The ability to predict LQT enables physicians to prevent the diseases with medical therapy such as beta blocking agents and opts for better treatments. Sequences AAZ90741-Z90752 represent PCR primers for defining human KVLQT1 mutations
                                                                                                                                                                                                                                                            Mutant forms of genes encoding minK protein and KVLQTI protein involved in cardiac potassium channel formation useful for screening drugs, for preventing and treating cardiac arrhythmia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                KVLQT1; mutation; human; cardiac I(ks) potassium channel; KCNE1; ss;

The present invention relates to antisense compounds, compositions and methods for modulating the expression of kinesin-like 1. The superfamily of kinesins function as molecular engines to bind and transport vesticles and organelles along microtubules using energy supplied by ATP. Kinesin-like 1, a member of the N2 (also called bimC) family of kinesins, is involved in separating the chromosomes by directing their movement along microtubules in the bipolar spindle. Kinesin-like 1 is also known as KNSII, EGS, HEBGS, HKSP, KIFII, thyroid interacting protein 5 and TRIPS. Inhibition of kinesin-like 1 may be a target for arresting cellular of kinesin-like 1 expression may contribute to other disease states such as B-cell leukaemia, autoimmune diseases such as carpal tunnel syndrome, as B-cell leukaemia, autoimmune diseases such as carpal tunnel syndrome, as B-cell leukaemia, autoimmune diseases such as carpal tunnel syndrome, arburitis, polymyositis and polyarteritis. Kinesin-like 1 is an autoantigen identified in systemic lupus erythematosus. The invention carburitis polymyositis and polyarteritis. Kinesin-like 1 is an autoantigen identified in systemic lupus erythematosus. The invention conding kinesin-like 1. Aleas provided are methods of screening for modulators of kinesin-like 1. Aleast a portion of the compound hybridises with RNA cto form an oligonucleotide-RNA duplex. It has at least one modified internucleoside linkage, sugar molety, or nucleobase. It has at least one cytosine which is a 5-methylcytosine. The antisense compound may comprise an antisense nucleic acid molecule that is specifically whybridisable with a 5'-untranslated region (UTR), with a start region, with a 3'-UTR, with an intron-ceron junction of a nucleic acid molecule encoding kinesin-like 1. ISI #344902.
                                                                                               New antisense compound 8 to 80 nucleobases in length targeted to a nucleic acid molecule encoding kinesin-like 1, useful for treating an animal having a disease or condition such as cancer, tumor, autoimmune

Claim 36; SEQ ID NO 161; 110pp; English.

The present invention relates to antisense compounds, compositions and methods for modulating the expression of kinesin-like 1. The superfamily of kinesins function as molecular engines to bind and transport vesicles and organelles along microtubules using energy supplied by ATP. Kinesin-like 1, a member of the N2 (also called bind) family of kinesins, is involved in separating the chromosomes by directing their movement along microtubules in the bipolar spindle. Kinesin-like 1 is also known as KNSII, EgS, HRSP, KIFII, thyroid interacting protein 5 and TRIPS. Inhibition of kinesin-like 1 may be a target for arresting cellular proliferation in cancer, due to its central role in mitosis. Expression of kinesin-like 1 expression may contribute to other disease states such as B-cell leukaemia, autoimmune diseases such as carpal tunnel syndrome, of kinesin-like 1 expression may contribute to other disease states such as B-cell leukaemia, autoimmune diseases such as carpal tunnel syndrome, as B-cell leukaemia, autoimmune diseases such as carpal tunnel syndrome, cof kinesin-like 1 expression may contribute to other disease states such autoantigen identified in systemic lupus erythematosus. The invention autoantigen identified in systemic lupus erythematosus. The invention correlates to antisense uncleic acid oligomers, targeted to the gene encoding kinesin-like 1. At least a portion of the compound hybridises with RNA cto form an oligonucleotide-RNA duplex. It has at least one modified internucleoside linkage, sugar moiety, prosphorothioate internucleoside linkage, sugar moiety, prosphorothioate internucleoside linkage, correlates and antisense nucleic acid molecule encoding kinesin-like 1.

Cromethoxyethyl sugar moiety, phosphorothioate internucleoside linkage, sugar moiety, or nucleobase. It has at least one cytosine which is a 5-methylcytosine. The antisense compound may comprise an antisense nucleic acid molecule encoding kinesin-like 1.

Cromethoxyethyl sugar moiety, phosphorothioate internucleoside linkage with a kinesin-like 1.

The present invention describes a human genome-derived myosin-like protein 1 (hGDMLP-1). The protein and polynucleotide sequences of hGDMLP-1 can be used in gene therapy and vaccine production. The hGDMLP-1 nucleic acids can be used as probes to detect, characterise and quantify hGDMLP-1 nucleic acids in samples, as amplification substrates, to hGDMLP-1 nucleic acids in samples, as amplification substrates, to provide initial substrates for the recombinant engineering of hGDMLP-1 protein variants having desired phenotypic improvements, and for expressing the proteins. The hGDMLP-1 proteins or polypeptides may be used as immunogens to raise antibodies that specifically recognise hGDMLP-1 proteins, as standards in assays used to determine the concentration and/or amount specifically proteins, as specific biomolecule capture probes for surface-enhanced laser desorption ionisation, as therapy applement in patients having specific deficiency in hGDMLP-1 production, and in vaccines or for replacement therapy. The production, and in vaccines or for replacement therapy. The production, and in vaccines or for replacement therapy. The production, and in vaccines or for replacement therapy. The concentration and skeletal muscle disorders. hGDMLP-1 may be used for diagnosing a disorder associated with the expression of hGDMLP-1, in particular heart can skeletal muscle disorders. hGDMLP-1 is localised to chromosome 22.

The present sequence in this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO capture for the present sequence in the sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New polypeptide, for raising antibodies that recognize hGDMLP-1 proteins, or as specific biomolecule capture probes for surface-enhanced laser desorption ionization, comprises human myosin-like protein hGDMLP-1.
                                                                                                                                                                                                                                                                                                                                      Human; genome-derived myosin-like protein 1; GDMLP-1; hGDMLP-1; heart; muscle; myosin; chromosome 22; gene therapy; vaccine; heart disease; skeletal muscle disorder; amplicon; screening; ss.
                                                                                                                                                                                                                                                             Human GDMLP-1 17-mer scanning SEQ ID NO:5 sequence SEQ ID NO:8114.

In additon, the SNPs identified can be used to identify agents suitable for use in treating Alzheimer's disease. Sequences AAC67301-C67610 are PCR primers used to demonstrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a novel method for determining the risk
antagonist of hGDMLP-1, or as an inhibitor of hGDMLP-1 activity. A pharmaceutical composition of the invention is useful for treating or preventing a disorder associated with decreased expression or activity hGDWLP-1, such as a disorder of heart and/or skeletal muscle function. The present sequence represents a 17-mer nucleotide, used in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a hairpin or hammerhead ribozyme, designed to cleave RNA encoding a cyclin or cell-cycle dependent kinase other than cell-cycle dependent kinases CDK1, PCNA and Cyclin B1. Representative examples of ribozyme recognition sites are given in AAAB415 to AAA86797. The ribozyme of the invention is useful for inhibiting restenosis by introduction of the ribozyme into cells. The ribozyme is resistant to endonuclease activity and hence is efficient in
                                                                                                                                                                                                   Ribozyme; hairpin; hammerhead; gene therapy; vasotropic; restenosis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New hairpin and hammerhead ribozyme for inhibiting restenosis, cleaves RNA encoding a cyclin or cell-cycle dependent kinase other than CDK1, PCNA and Cyclin B1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Length 19;

This invention relates to a novel activated mutant protein tyrosine kinases and associated methods for diagnosing cancer and screening for atti-cancer agents. Protein kinases are signalling molecules involved in tumourigenesis. Mutational analysis of the human tyrosine kinase gene family identified somatic alteration sin 1 in 5 colorectal cancers, with the majority of mutations occurring in the NTRK3, FRS, GUCY2F and MCCK/MIX4 genes. Most were identified in the kinase domain. The invention may be useful for the production of compounds with a cytostatic activity acting as protein tyrosine kinase inhibitors or guanylate cyclase stimulators. The invention may be useful for developing methods for detecting mutations involved in cancer or screening for anti-cancer agents. The present sequence is that of a human-derived oligonucleotide
                                                                                                                                                                                                                                                                                                                                                 Activated mutant protein tyrosine kinases (e.g. NTRK3, FES and MCCK) and associated methods for diagnosing cancer and screening for anti-cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Maspin; serpin; mammary epithelial cell; human; promoter; malignant; tumour cell; treatment; prostate cancer; breast cancer; metastasis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a method for treating a proliferative skin or eye disease and scarring. The method involves administering a ribozyme [1] which cleaves RNA encoding a cytokine involved in inflammation, matrix metaloproteinase (MMP), cyclin, cell-cycle dependent kinase, growth factor or a reductase, or administering a nucleic acid molecule [11] comprising a promoter operably linked to a nucleic acid segment encoding [1]. [1] can have antipsoriatic, christophalmological, cytostatic, antiseborrheic, antidiabetic, antisickling, ophthalmological, vulnerary, keratolytic and virucide activities, and clasves RNA encoding cytokine involved in inflammation. [1] can be used in gene therapy. [1] and [11] are useful for treating proliferative skin diseases such as psoriasis, atopic dermatitis, actinic keratosis, aquamous or basal cell carcinoma and viral or seborrheic wart. They can also be used for treating proliferative eye diseases such as diabetic retinopathy, vitreoretinopathy, sickle cell retinopathy, retinopathy of prematurity and retinal detechment, and for treating and preventing prematurity and retinal detechment, and for treating and preventing carring such as keloid, adhesion and hypertrophic or hypertrophic burn sear.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ..
